

Cognitivism

About cognitivism

One of the first critics of [behaviorist learning theories](#) approach came from [gestalt psychologists](#) and was related to behaviorist dependencies exclusively on overt behavior. It was the gestalt views of learning that **offered a new approach to learning** that extended beyond behaviorism and set the **basic principles of what is today known** as [cognitive](#) theories. In the 1960s behaviorism as a dominant [learning paradigm](#) was replaced by cognitivism.

[Cognitive](#) approach to learning, unlike behavioral, sets the **learner as the locus of control** and not just as a passive participant. It attempts to open the “black box” of his mind and **explain complex processes** in it. Cognitivist theories emphasize the **importance of the learner**, especially **his prior knowledge and experiences** as well as **his role of an organized information processor**.

Learning theories:

- [Gestalt Psychology](#)(Max Wertheimer)
- [Social Cognitive Learning Theory](#) (Albert Bandura)
- [Assimilation Theory](#) (David Ausubel)
- [Cognitive Load Theory](#) (John Sweller)
- [Cognitive Theory of Multimedia Learning](#) (Richard Mayer)
- [Schema Theory](#) (Sir Frederic Bartlett)
- [Stage Theory of Cognitive Development](#) (Jean Piaget)

Instructional design theories and learning models:

- [Cone of Experience](#) (Edgar Dale)
- [Concept Mapping](#) (Joseph Novak)
- [Component Display Theory](#) (Dave Merrill)
- [Elaboration Theory](#) (Charles Reigeluth)
- [Mental Model Theory Of Thinking And Reasoning](#) (Philip Johnson-Laird)
- [Scripts Theory](#) (Roger Schank)
- [Structural Learning Theory](#) (Joseph Scandura)

Criticism

Since its development during the 1960s various critics of cognitivism have emerged, challenging its assumption that **mental functions can be compared to a information processing model**. Some authors like John Searle or Roger Penrose claim that computation, **due to its inherent limitations**, can never achieve the complexity and possibilities of mental functions and therefore cannot be successfully used to describe them. **Gödel's incompleteness theorem** or **Turing's halting problem** are often held as proves for this point of view.

During the 1970s **humanism evolved as an opposing view to both behaviorism and cognitivism** beginning with the **holistic approach**, belief in the power of an individual and view **learning as a way of fulfilling his potentials**.
