

Stožac iskustva

Općenito

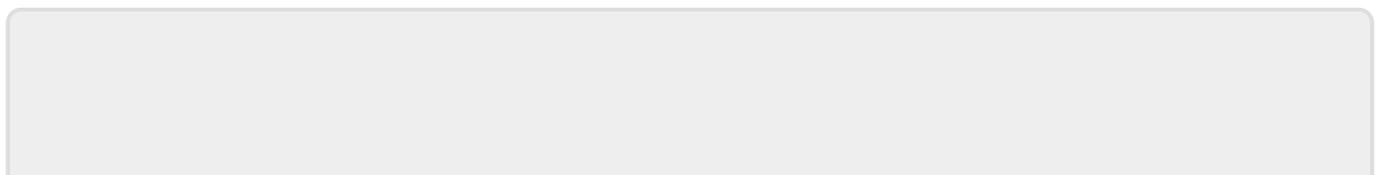

Stožac iskustva (**cone of experience**) je slika koja opisuje **doprinos različitih vrsta učenja kroz iskustvo**, koju je uveo [Edgar Dale](#) 1946. godine.

Što je stožac iskustva?

Pojam *stožac iskustva* Edgara Dalea prvi put je predstavljen u njegovoj knjizi "Audio-vizualne metode u poučavanju", izdanoj 1946. To je slika koja opisuje dobit od različitih vrsta iskustva u učenju. Stožac je organiziran počevši od **najapstraktnijih iskustava na vrhu**, prema **najkonkretnijim iskustvima na dnu**. U kasnijim izdanjima knjige bio je podvrgnut manjim izmjenama, no originalna slika stožca može se pronaći [ovdje](#).

The importance of Dale's cone of experience is in its assumptions of **how we learn more efficiently** and in **appliance** of such resources or activities **during the educational process**. Assumptions stated in this cone have been of interest to many later psychologists and [cognitivist theories](#).
