

The Coherence Principle

Theory

The coherence principle (also called *seductive details*¹⁾ effect) claims that extraneous material that may be interesting or motivating but is irrelevant for learning objectives generally wastes learning resources and **hinders learning of important material**. This assumption is grounded in the fact that human cognitive resources are limited. Still, [cognitive load theory](#) predicts this effect will only occur if the cognitive load imposed by important learning material is high enough.²⁾

Practice

Seductive details can appear in virtually any format, but often as

- text, or
- external links.

Research status

A number of studies on the effect of seductive details have demonstrated:

- negative effects on learning of important material³⁾
- lack of negative effects on learning of important material.⁴⁾

Surprisingly, a recent study even found a large increase in learning due to seductive details.⁵⁾ Possible explanations offered for this phenomenon are:

- low cognitive load imposed by instructional material in combination with
 - increase in motivation (and thereby increase in use of cognitive resources) caused by seductive details
